Abstract

The Farmers' Sales and Market Price Tracker is a smart digital platform designed to help farmers make better and more informed decisions when selling their agricultural products. Farmers often face difficulties in accessing updated market prices, comparing prices across different markets, and managing their crop sales efficiently. The proposed system provides a centralized platform where farmers can select their crops, view and compare market prices, and access useful sales information through a simple dashboard. The system connects the application with a database or API to collect and present relevant market price data in an easy-to-understand format. By improving access to market information and simplifying sales management, the proposed solution aims to reduce information gaps, support better pricing decisions, and improve the overall efficiency and profitability of agricultural selling.

01 · OVERVIEW

The farm dashboard turns scattered decisions into one operating picture

One personalized dashboard connects the signals behind the day’s decisions.

THE OPERATING PICTURE

Performance

Track the numbers that show how the farm is running.

Sales

Keep crop sales and payment status in view.

Crop inventory

Know what is growing, available, and moving.

Market conditions

See price movement before it becomes a missed decision.

Designed for farmers and agricultural business operators managing their own farms and crop sales.

02 · PERFORMANCE

Start with the numbers that matter most

A compact first read keeps the daily review focused on performance and profit.

TOTAL REVENUE

₹45.2k

↑ 12% versus last month

NET PROFIT

₹32.4k

↑ 15% growth

READ FIRST

Revenue shows the pace. Net profit shows what the pace is worth.

03 · CONTROL SURFACE

Know what is growing, what is owed, and what needs attention

Crop management becomes one operational control surface instead of a set of disconnected checks.

GROWING

8

Active crops

See the crop mix currently in motion.

AVAILABLE

450

Inventory units

Know what can move next.

OWED

₹182,000

Pending payments

Surface receivables before they become surprises.

Made with GAMMA

04 · MARKET SIGNALS

Market alerts turn price movement into a selling signal

Direction is easier to act on when every crop has a clear signal.

TOMATO

+12%

UPWARD
Review the selling window.

ONION

−8%

DOWNWARD
Recheck timing and price.

MAIZE

—

STABLE
Hold the current read.

05 · SALES TRACEABILITY

Every sale leaves a trail from crop to payment

The transaction log bridges field activity and business control.

Outstanding receivables stay visible before they become surprises.

Date	Crop	Qty.	Price	Buyer	Payment
Review	Crop name	Units	Rate	Buyer record	Status
Trace	From field	Sold	Agreed	Named buyer	Received / pending

01 Review the full sale record

Date, crop, quantity, price, buyer, and payment status stay connected in one transaction trail.

06 · REVENUE ANALYSIS

Revenue analysis makes the next move easier to see

Compare revenue and expenses across 7D, 30D, and 1Y views; then act on the crop leading the business.

7D 30D 1Y

TOP-SELLING CROP

Rice (Basmati)

₹451,000

Single transaction

Use the view that matches the decision: 7D for the immediate read, 30D for operating rhythm, 1Y for direction.

07 · DAILY WORKFLOW

FarmKing replaces guesswork with a repeatable daily workflow

One review turns the dashboard into a habit: see the signal, then take the next action.

01

Log in

Open the personalized dashboard.

02

Review

Check performance and financial summary.

03

Check

Scan market alerts and sales activity.

04

Manage

Update inventory and pending payments.
